15.2 Description

The terminal ICS466x*-** is a weighing indicator, located as intrinsically safe apparatus inside the hazardous area.

The communication with other devices is done via dedicated interfaces.

The electrical components of the terminals are fixed in a metal enclosure providing a degree of protection of IP65.

In the front plate of the enclosure a keyboard and a display are mounted. Inside the enclosure a backplane, a main board, the display, up to three input/output modules and terminals for the connection of the external intrinsically safe circuits are fastened.
